Overview

Overview

The project "Dialogflow Design Conversation" was created with the aim of creating and improving conversation models using Dialogflow, a natural language-based chatbot and intelligent application development platform. The main focus of this project was to design a friendly and efficient conversational experience through Dialogflow.

Problem Statement

In the Dialogflow Design Conversation project, there was a need to improve the quality and effectiveness of interactions between users and virtual assistants using the Dialogflow platform. The main challenges involved context understanding, irrelevant responses, and suboptimal user experience. The project focused on redesigning conversations to be more adaptive, understand complex questions, and provide contextualized responses. The goal was to create a more humanized and efficient speaking experience, improve the responsiveness of the virtual assistant, and increase user satisfaction with the conversational system.

Objective

To address these challenges, the Dialogflow design conversation live project has a key objective:

- Optimize the interaction between users and virtual assistants on the Dialogflow platform.
- Improve the ability of virtual assistants to understand the context of conversations.
- Design more relevant and contextualized responses to users' complex questions.
- Improve the adaptability of the system in responding to variations in conversations.
- Improve the continuity of the speech experience to ensure humanized responses.
- Enhance the responsiveness of the virtual assistant to be faster and more efficient.
- Increase user satisfaction with the Dialog Flow conversation system.

DARCI

	Tags	Guidelines
Decider	Eric Julianto	Develop features and approve key decisions related to the development and deployment of Dialog Flow Design Conversation projects.
Accountable	Alfian Fakhrudin	Responsible for the smooth running of the project by supervising and ensuring all tasks are completed and objectives are achieved, and reporting to decision makers.
Responsible	Aryaguna Abi Rafdi Yasa Cantika Aryanti Mayori Permitha	Fully responsible for all technical aspects and leadership of market analysis projects. Ensure feature success and collaborate with the development team to overcome obstacles. In addition, be directly involved in project execution.
Consulted	Eric Julianto Fauzan Ihza Fajar	Consult with external market research experts who have deep insight into the industry and understanding of the market impacting the dialog flow conversation project thoroughly so as to ensure the accuracy and validity of the market analysis. in addition, work closely with stakeholders to gather feedback, information and input. collaborate with product managers to consult on planning relevant product aspects.
Informed	Eric Julianto	Maintaining transparency in communicating about obstacles and potentials in the project is crucial. Routinely monitor progress, challenges, and potentials related to the project. Proactively seek and integrate feedback from multiple perspectives, and take responsibility for ensuring the participation of those involved.

Project Timeline

Time Period	Activity	PIC
8 januari - 12 Januari 2024	Project Kickoff and Planning	PM

Time Period	Activity	PIC
15 Januari -19 Januari 2024	System Design and Architecture	cantika, mayori, rafdi
22 Januari - 26 Januari 2024	Dialogflow GUI, follow up question and context	cantika, mayori, rafdi
29 Januari - 2 Februari 2024	learn about dialogflow webhook	cantika, mayori, rafdi
5 - 9 Februari 2024	working on dialogflow webhook	cantika, mayori, rafdi
12 - 16 Februari 2024	Conversation design for final project	cantika, mayori, rafdi
19 - 23 Februari 2024	Working on final project dialogflow webhook	cantika, mayori, rafdi
26 Februari - 1 maret 2024	working on final report, out-boarding, farewell	cantika, mayori, rafdi

Success Metrics

Metrics	Definition	Actual	Target
Accuracy of relevant answers	% accuracy of the answer given to the question given by the user		85% Accuracy
speed of response	speed of responding to user-given chats		< 2 sec
User Experience Enhancement	user satisfaction survey of chatbot features (zira) (measured using a 10%-100% scale)		Achieve a counting precision of 90%.
Multi-Language Support	Dialogflow Design Conversations' ability to support multiple languages to improve global accessibility		Minimum 2 support language Bahasa & English

Metrics	Definition	Actual	Target
performance and efficiency	users want to interact with virtual assistants on the Dialog Flow platform seamlessly to get information and assistance efficiently.		Achieved a 50% reduction in user time searching for information and assistance

User Stories

Title	User Story	Acceptance Criteria	Priority
-------	------------	---------------------	----------

Title	User Story	Acceptance Criteria	Priority
More relevant responses	As a user seeking quick and concise information, I desire the virtual assistant to deliver clear and concise responses, avoiding unnecessary details and providing the most relevant information based on my query.	Given a user looking for quick and concise information, When the user interacts with the virtual assistant, Then the virtual assistant should deliver clear and concise responses, avoiding unnecessary details and providing the most relevant information based on the user's query.	High
Greeting	as a user, I want to get help and information quickly	Given the conversation keyword "hello", When the chatbot processes the input Then it should provide an introduction response and help the user around braincore.	High

Title	User Story	Acceptance Criteria	Priority
Consultation	As a user, I would like to know the requirements for consultation.	Given the user a button to access the chatbot when the user is already in the chatbot, the user asks the question "What are the steps to do an AI consultation at Braincore.id?" Then the chatbot will provide detailed and necessary consultation requirement information at braincore. Example: user: I would like to know the requirements for a consultation. Zira: Information that needs to be prepared includes: - Purpose of AI use - Available data - Required capabilities - Time limit and budget	High

Title	User Story	Acceptance Criteria	Priority
Services	As a user, I would like to know what services braincore provides.	Given users with a button to access the chatbot When the user is inside the chatbot, the user asks the chatbot the question "What services are available at Braincore", Then the chatbot should present the complete list of services provided by Braincore and the user will know the list of services from the company.	High

Title	User Story	Acceptance Criteria	Priority
Contact	As a user, I would like to know what contacts are available to contact braincore.	Given access to users in the form of a button to access the zira chatbot When the user is inside the chatbot, the user ask "how do we get in touch with braincore?" Then, zira provides contacts that you can contact, among others: Location: Jl. Letjen S. Parman No.28 Email: braincore.id@gmail.com Call: +62 821 2560 9413	High
